

ERD Changes

Based on the feedback we received for our ER Diagram, we have made the following changes:

- We have normalized the PreferredPosition entity to have 2 attributes instead of 11 attributes.
- The final attributes of the tables – PlayerID, PreferredPosition
- We have normalized the PlayerSkills entity to have 2 attributes i.e. Player ID, PlayerSkill
- We have updated the entity relation between Player Fitness and Player Details to one-to-one.
- We have updated the entity relation between Team Record and Player Details to one-to-many.
- We have removed PlayerID attribute from Team Player entity.
- We have updated Player Game Record entity with PlayerID as Primary key and added InternationalStanding as an attribute in the Player Details Table inorder to avoid data redundancy.
- We have added Tournament Details_has_Referee Details entity as an associative entity between Tournament Details and Referee Details.
- We have deleted the relation between Player Details and Penalty Shootout Details entity.
- We have removed Age attribute from Player Details entity inorder to avoid data redundancy.
